Target version:	ISTI Open Portal Tasks		
<b>Description</b> Once a result set is displayed and the faceted queries are reported, we should consider supporting users executing many faceted queries in one step (this might lead to an empty set).  Examples of expected "queries" are <ul style="list-style-type: none"><li>• give me the result set items of authors A and B (where A and B where possible values of facet queries);</li><li>• give me the result set items of authors A in Year B and C;</li></ul>

Done.

Is it possible to perform faceted queries specifying a different operator for each field (AND / OR).
